

Multi-Channel Digital Marketing Performance

Executive Performance Report — Q2 2026

Prepared by: Keisy Fernanda

Role: Data Analyst / Business Intelligence Specialist

Platform: Looker Studio (Google Data Studio)

Executive Summary

This project focused on consolidating digital marketing performance data from multiple advertising platforms into a centralized Business Intelligence dashboard. The solution enabled marketing stakeholders to monitor campaign effectiveness, optimize advertising spend, and improve decision-making through real-time analytics.

Business Problem

A global e-commerce company was managing advertising campaigns across multiple digital marketing platforms. Each channel operated independently, making it difficult to evaluate overall performance and identify inefficiencies.

Project Objective

Design and develop an interactive executive dashboard in Looker Studio that consolidates marketing data from Google Ads, Meta Ads, and TikTok Ads, providing real-time visibility into performance and supporting data-driven decisions.

Key Performance Indicators

ROAS: $\text{Revenue} \div \text{Advertising Spend}$. Goal: $>3.5x$ profitability.

CPA: $\text{Total Advertising Spend} \div \text{Total Conversions}$.

Funnel Conversion Rate: Tracks progression from impressions to purchases.

Dashboard Features

Cross-channel comparison, interactive filters, KPI monitoring, funnel visualization, ROAS and CPA trends, and executive summary cards.

Key Findings & Insights

Meta Ads achieved a 22% lower CPA than Google Ads for a similar audience. A 15% budget reallocation toward Meta Ads was recommended to improve efficiency.

Business Impact

Centralized reporting reduced manual effort, improved transparency, accelerated decision-making, and enhanced budget allocation strategies.

Technologies Used

Looker Studio, Google Ads, Meta Ads, TikTok Ads, Data Modeling, Marketing Analytics, KPI Design, and Business Intelligence Reporting.

Conclusion

The project transformed fragmented marketing data into a centralized analytics solution that improved visibility into advertising performance and enabled actionable optimization opportunities.
